Nightlark Weekly Report

Oct 30 – Nov 5, 2026
Data through Nov 4

Blended results

SHOPIFY SALES	TOTAL AD SPEND	BLENDED ROAS
$2,913.00	**$4,229.02**	**0.69x**

CHANNEL	SPEND	SHARE OF SPEND	PLATFORM-REPORTED PURCHASES	PLATFORM-REPORTED REVENUE
Meta Ads	$4,113.55	97%	10	$2,084.00
Google Ads	$115.47	3%	0	$0.00
Total	**$4,229.02**	100%	**10**	**$2,084.00**

Blended ROAS = Shopify sales ÷ total ad spend across Meta and Google. Shopify recorded $2,913 in sales, about 40% more than the $2,084 Meta reported, since Meta only counts purchases it can trace back to an ad.

Meta Ads

SPEND	PURCHASES	REVENUE	ROAS
$4,113.55	**10**	**$2,084.00**	**0.51x**

COST PER PURCHASE	AOV	LANDING PAGE VIEWS	CHECKOUTS STARTED
$411.36	**$208.40**	**1,222**	**42**

Revenue and purchases as reported by Meta.

Why cost per purchase is high this week

Cost per purchase was higher than our recent baseline of $102–$150. Two planned changes drove it:

1. **Testing new ad concepts.** We relaunched the Broad Creative Test campaign on Oct 28 with new ad concepts. It took 55% of spend this week ($2,252). New ads always cost more per purchase at first while Meta learns which people respond to them. With 8 purchases this week, the campaign is still in Meta's learning phase, which ends after about 50 purchases a week.
2. **Higher budget.** For the last 7 days we spent more to support the test, up to about $900/day. Before that we were around $400/day. Pushing more budget into new ads while they're still learning raises cost per purchase in the short term.

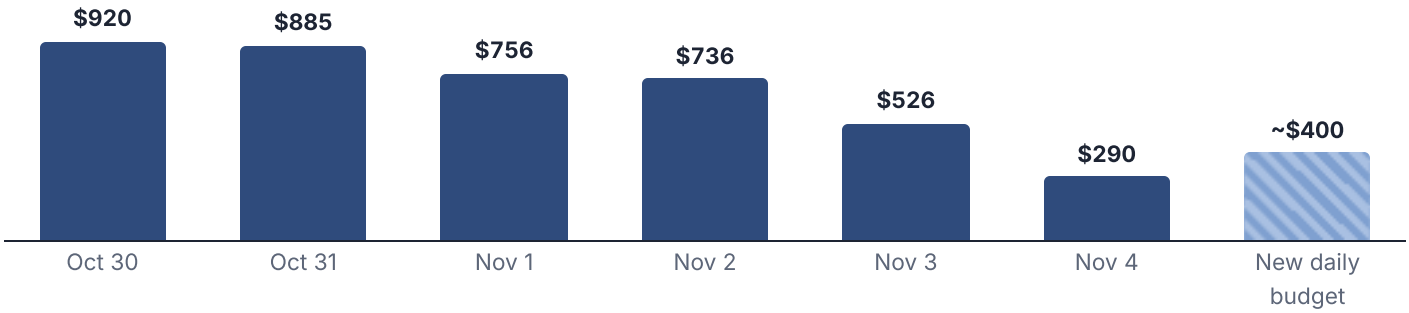

What we've done: reallocated budget to stabilize results

CAMPAIGN	SPEND	PURCH.	ROAS	COST / PURCH.	ACTION
Broad Creative Test (new concepts)	$2,251.69	8	0.73x	$281.46	Scaled back from ~$500/day to ~$250/day so it can learn at a steadier pace
NL | Prospecting Broad Test	$1,807.86	1	0.14x	$1,807.86	Paused Nov 4, budget moved to better performers
Retargeting | 9/16	$54.00	1	3.56x	**$36.42**	Turned on Nov 3, sending warm traffic to the 50% off offer
NL | Grey Waffle NEW	—	—	—	—	Just launched at $125/day, running only our best-performing video

Retargeting with the 50% off offer. We turned retargeting back on and pointed it at the 50% off offer for people who already visited the site. It tracked its first purchase at a **$36 cost per purchase**, a $192 order and a 5.3x ROAS for the day. That's the most efficient result in the account this week, and we'll keep watching it as it builds volume.

NL | Grey Waffle. We just launched a campaign that runs only our best-performing video to date, with a $125/day budget. This puts spend behind an ad already proven to convert instead of unproven concepts. That should help bring cost per purchase down while the new ads finish learning.

Meta daily spend

With NL | Grey Waffle added, total daily budget is back to about $400/day, where it was before the test. Our last week at that level (Oct 21–27) was also our most efficient recently, at a $102 cost per purchase and 1.31x ROAS.

Google Ads

CAMPAIGN	SPEND	IMPR.	CLICKS	CTR	AVG. CPC	CONV.	IMPR. SHARE
Search – Branded	$115.47	200	51	25.5%	$2.26	0	77%

Branded search was the only Google campaign running this week. It held a strong 25.5% click-through rate and showed for 77% of searches for the brand, but no purchases were recorded in Google this week. The remaining 23% of searches were missed because of ad rank, not budget, so a modest bid increase would capture more of that branded traffic.

What's next

- Give the new ads time to finish learning at the lower budget before making more changes.
- Watch how the 50% off retargeting performs as it gets more traffic, and add budget if the cost per purchase holds.
- Track NL | Grey Waffle through its first week. If it performs, it becomes the main campaign we scale.
- Raise branded search bids slightly to win more of the brand searches we are currently missing.
- We expect cost per purchase to come back toward the recent baseline of $100–$150.
